

AUTOMATIONX · COMMUNITY EDITION

STUDENT BUILD GUIDE · NO. 01

Assam Honey

From zero to a live, cinematic, scroll-driven luxury website — using only free tools.

One AI-generated honeycomb becomes a full editorial website: image generation, video generation, frame-sequence scroll technology, and a single master prompt that builds the entire site.

NINE STEPS

COPY · PASTE · DEPLOY

EST. BUILD TIME — ONE AFTERNOON

COST — ₹0 / \$0

CONTENTS

What you'll build, in nine steps

01 Generate the 7 hero keyframe images

02 Generate the hero video clips

03 Merge the clips into one hero video

04 Understand the scroll technology

05 Generate the supporting assets

06 Organize the project folder

07 The master prompt

08 Test locally

09 Deploy to a live URL

— Going further: the polish passes

HOW TO READ THIS GUIDE

Every dark block is a prompt. Copy it exactly as written — including the "no text, no watermarks" endings. They are doing real work.

ONE RULE ABOVE ALL

Do not skip Step 4. It explains why this site uses a canvas frame sequence instead of a video — the single decision that makes it feel expensive.

OVERVIEW

The ritual, told by scroll

*honeycomb → honey begins to flow → dripping down → poured
into a jar → swirling → lifted on a spoon → cradled in hands*

You're building a luxury scroll-driven website where the visitor's scroll controls a cinematic honey ritual, frame by frame. The scroll bar is the shutter; the page is the film.

Below the hero sits a sticky product explainer for three single-origin varietals, a horizontal gallery of the collection, three looping ritual cards, a parallax brand statement, and a newsletter — all built from one organized asset folder and one master prompt.

WHAT YOU'LL NEED — ALL FREE

An AI image tool

Nano Banana 2 (inside Google Flow), GPT Image, or anything supporting reference-image chaining.

Any video editor

Canva, CapCut, Premiere — whatever you already use. Used once, to merge six clips.

Google Antigravity

Free. Builds the entire website from one master prompt.

An AI video tool

Seedance 2.0 (Higgsfield) or Veo 3.1 — anything that accepts a start frame and an end frame.

FFmpeg

Free, command-line, used once to extract the frame sequence. Antigravity can run it for you.

GitHub + Netlify or Vercel

Free. For the live deploy — under two minutes, no build command.

THE FULL PIPELINE AT A GLANCE

Generate 7 hero keyframe images (chained references)

Generate 6 video clips, start-frame → end-frame

Merge into one hero video (hard cuts only)

Extract the hero video into a JPEG frame sequence

Generate product, background, lifestyle images + 3 ritual-card loops

Organize everything into one folder

Hand Antigravity one master prompt – it builds the whole site

Deploy: GitHub → Netlify / Vercel

OI Generate the 7 hero keyframe images

Generate these in order. For every image after the first, upload the previous image as a reference — this is what keeps the lighting, camera angle, and composition identical across the whole sequence, so the video generator can animate smoothly between them.

Shared style language. Every prompt below uses the same visual world on purpose: pure black studio background, single warm amber spotlight from directly above, ultra photorealistic macro product photography, no text, no labels, no watermarks. Keep your own product in this same language if you're swapping honey for something else.

Image 1 — Honeycomb Hero

image-1-honeycomb-hero.png
reference: none

PROMPT · COPY EXACTLY

A single premium honeycomb piece floating in the exact center of the frame, pure black background, dramatic warm amber spotlight from directly above, rich hexagonal texture, glowing golden honey trapped inside, tiny amber droplets clinging to the edges, one small honeybee hovering subtly near the upper left edge of the honeycomb, elegant and realistic, ultra photorealistic macro product photography, luxurious and cinematic, no text, no labels, no watermarks

Image 2 — Honey Begins to Flow

image-2-honey-begin-to-flow.png
reference: image-1

PROMPT · COPY EXACTLY

The same honeycomb piece now beginning to release thick golden honey, pure black background, warm amber spotlight, slow-motion honey droplets stretching downward in elegant strands, glossy reflections, tiny floating particles around the comb, one small honeybee gently flying away from the honeycomb toward the right side of the frame, photorealistic 8K macro product photography, no text, no labels, no watermarks

Image 3 — Honey Dripping Down

image-3-honey-dripping-down.png

reference: [image-2](#)

PROMPT · COPY EXACTLY

Thick liquid honey flowing from the honeycomb in graceful slow motion, center of frame, pure black background, warm amber spotlight from above, long glossy honey strands dripping downward like molten gold, tiny bubbles and light reflections inside the honey, cinematic premium product shot, no text, no labels, no watermarks

Image 4 — Honey into Jar

image-4-honey-into-jar.png

reference: [image-3](#)

PROMPT · COPY EXACTLY

A glass honey jar floating in the exact center of the frame, pure black background, dramatic warm amber spotlight, honey pouring from above into the jar in a rich golden stream, liquid splashing softly inside, glowing amber highlights, ultra realistic premium product photography, no text, no labels, no watermarks

Image 5 — Honey Swirl in Jar

image-5-honey-swirl.png

reference: [image-4](#)

PROMPT · COPY EXACTLY

The same glass jar now partially filled with glowing golden honey, the honey stream still pouring in from above and folding into an elegant spiral as it lands, visible swirl pattern rippling across the surface, tiny suspended air bubbles catching the light, pure black background, dramatic warm amber spotlight from directly above, ultra realistic premium product photography, no text, no labels, no watermarks

Image 6 — Honey Spoon Lift

image-6-honey-spoon-lift.png

reference: [image-5](#)

PROMPT · COPY EXACTLY

A golden spoon lifting thick honey from the jar, pure black background, warm amber spotlight, long sticky honey strands stretching dramatically from the spoon back to the jar, glowing liquid texture, ultra detailed macro photography, cinematic and luxurious, no text, no labels, no watermarks

Image 7 — Final Honey Serve

image-7-final-honey-serve.png
reference: image-6

PROMPT · COPY EXACTLY

A premium crystal glass honey jar filled with glowing thick amber honey floating in the exact center of the frame, pure black background, dramatic warm amber spotlight from directly above, tiny suspended bubbles and soft reflections visible through the clear glass walls, two realistic human hands entering from behind the jar and wrapping naturally around the sides and bottom, only the hands visible, no face and no body, palms supporting the weight of the jar, fingers slightly bent and asymmetrical with visible knuckles and soft skin texture, the jar remains perfectly centered as the hero object, warm golden light from the honey illuminating the fingers where they touch the glass, minimal luxurious composition, ultra photorealistic 8K, no text, no labels, no watermarks

O2 Generate the hero video clips

Generate **six clips**, each using one image as the start frame and the next as the end frame. Generate one at a time — don't queue all six together; quality suffers when you do.

Each clip should run roughly **3–5 seconds**, so the merged video lands around 25–35 seconds total.

CLIP	START	END	SAVE AS
1	image-1	image-2	v1-honeycomb-to-flow.mp4
2	image-2	image-3	v2-flow-to-dripping.mp4
3	image-3	image-4	v3-dripping-to-jar.mp4
4	image-4	image-5	v4-jar-to-swirl.mp4
5	image-5	image-6	v5-swirl-to-spoon.mp4
6	image-6	image-7	v6-spoon-to-hands.mp4

Video 1 — Honeycomb → First Flow

Ultra slow motion seamless transformation. A single premium honeycomb floats in darkness under a warm amber spotlight. After a moment of complete stillness, the honeycomb begins to soften and release thick golden honey, and one small honeybee gently drifts away from the upper left edge. The honey strands start forming naturally and the image smoothly evolves toward the second frame. Camera completely locked, zero movement, no shake, no cuts, no text, no watermarks.

Video 2 — First Flow → Full Dripping

Ultra slow motion seamless transformation. Thick golden honey is beginning to flow from the honeycomb under a warm amber spotlight on a pure black background. The honey stretches downward in elegant glossy strands, becoming longer and heavier with realistic viscosity until it becomes a full dripping cascade. Camera completely locked, zero movement, no shake, no cuts, no text, no watermarks.

Video 3 — Dripping → Pour into Jar

Ultra slow motion seamless transformation. Thick liquid honey drips downward in long molten-gold strands on a pure black background under warm amber light. A clear glass honey jar rises smoothly into position beneath the dripping strands and the honey begins pouring into it, creating soft glowing ripples and subtle splashes as the jar starts filling. Camera completely locked, zero movement, no shake, no cuts, no text, no watermarks.

Video 4 — Jar Pour → Swirl

Ultra slow motion seamless transformation. A clear glass jar is being filled with glowing golden honey under a dramatic amber spotlight on a pure black background. The pouring stream folds into the honey already in the jar, forming an elegant spiraling swirl across the surface, tiny bubbles rising gently. Camera completely locked, zero movement, no shake, no cuts, no text, no watermarks.

Video 5 — Swirl → Spoon Lift

Ultra slow motion seamless transformation. Golden honey swirls gently inside a glass jar under warm amber light. A golden spoon lowers into the jar and lifts thick honey upward in one smooth motion, long sticky strands stretching elegantly back toward the surface. Camera completely locked, zero movement, no shake, no cuts, no text, no watermarks.

Video 6 — Spoon Lift → Hands Holding Jar

Ultra slow motion seamless transformation. A golden spoon lifts thick honey from the jar on a pure black background under warm amber light, long glowing strands stretching between spoon and jar. As the honey strands slowly settle back into the jar, the spoon glides gently out of frame and a crystal glass honey jar filled with glowing thick amber honey becomes the focus in the exact center. After a moment of stillness, two realistic human hands begin entering the frame very slowly from behind the jar – fingers first, then palms – moving forward with calm intention to support the jar from the back and sides. Only the hands are visible, no face and no body. As the hands make contact with the glass, the amber glow from the honey begins illuminating the skin of the hands with warm golden light, softly tinting the fingers where they touch the jar. The jar remains perfectly centered and still, the warmth shared through the glass, the ritual complete. Camera completely locked, zero movement. Ultra slow motion, cinematic, photorealistic, no text, no watermarks.

STEP THREE

03 Merge the clips into one hero video

- 01 Open Canva (or CapCut, or your editor of choice) → new **Video** project.
- 02 Upload all six clips.
- 03 Drag them onto the timeline in exact order: v1 → v2 → v3 → v4 → v5 → v6.
- 04 Select every join point between clips → set **No transition**. Hard cut only — no fades, no dissolves.
- 05 Export as MP4, highest quality.
- 06 Save as honey-story-final.mp4

WHY HARD CUTS ONLY?

Each clip's end frame matches the next clip's start frame exactly — that's literally how you generated them. A hard cut between two identical frames is invisible. It plays back as one continuous shot, not six separate clips.

O4 Understanding the scroll technology

This is the part most guides skip, and the part that actually makes or breaks the site. There are two ways to build a scroll-controlled hero, and they are **not interchangeable**.

OPTION A — NOT THIS

Video scrubbing

Keep the merged video as one file and set `video.currentTime` as the user scrolls. Sounds simpler — but browsers don't seek video frame-accurately, and mobile Safari throttles or blocks programmatic seeking. Lighter, unreliable.

OPTION B — THIS GUIDE

Canvas frame-sequence

Extract the video into hundreds of JPEGs ahead of time, then draw the correct frame to a `<canvas>` as the user scrolls — never touching a video element. Heavier to download, far more reliable. The same technique Apple uses on its own product pages.

4a — Re-encode is optional, extraction is not

You don't need to keyframe-encode the merged video first if you're only extracting frames from it — that trick matters only if you were going to scrub the video directly, which we're not. Extract straight from your exported `honey-story-final.mp4`.

4b — Extract every frame as a JPEG

Give this exact command to Antigravity — it has terminal access and will run it for you — or run it yourself if you have FFmpeg installed.

TERMINAL

```
ffmpeg -i honey-story-final.mp4 -vf "fps=20,scale=960:-1" -q:v 4 frames/frame_%04d.jpg
```

fps=20

Samples 20 frames per second. A 30-second video produces roughly 600 frames — 20fps reads as perfectly smooth to a scrolling eye and cuts the frame count noticeably.

`scale=960:-1` Downsizes to 960px wide, height automatic. It's a hero background, not a print asset — 960px keeps files small with no visible quality loss.

`-q:v 4` High JPEG quality. Lower number = higher quality; 2–5 is the usual sweet spot.

`output` A folder of sequentially numbered frames, `frame_0001.jpg` through however many your video produces.

4c — Why this doesn't kill performance

Do not preload every extracted frame before showing the page — for a 600–800 frame sequence that's tens of megabytes at once, which stalls everything. Instead, the site should:

01 Preload only the first ~40 frames, then reveal the page.

02 Load frames just-in-time as the user scrolls, keeping a rolling window of roughly 60 decoded frames on each side of the current position.

03 Prefetch about 15 frames ahead in the current scroll direction so scrubbing never looks frozen.

04 Drop frames outside that window from memory as the user scrolls past them.

You don't have to write this yourself — the master prompt in Step 7 tells Antigravity to build exactly this pattern. You just need to understand *why* it's specified that way, so you never let an AI "simplify" it back down to a full preload later.

05 Generate the supporting assets

The hero sequence alone can't carry a whole site. Generate these in the same black-studio, warm-amber-light visual language so everything feels like one shoot.

5a — Product images (3)

Use the first as the reference for the other two so the jar shape and label placement stay identical.

LITCHI

assam-honey-litchi.png · reference: none

A single premium glass honey jar floating in the exact vertical center of the frame, pure black studio background, dramatic warm golden spotlight from directly above, the jar filled with pale golden litchi-blossom honey, condensation-free clean glass, a minimal cream label with "ASSAM HONEY" in small elegant serif gold lettering and "LITCHI" beneath it in smaller lettering, a single dried litchi flower resting beside the jar, floating completely in mid-air with no surface no floor no table beneath it, ultra photorealistic 8K, luxury food product photography, no watermark, no extra text.

MUSTARD

assam-honey-mustard.png · reference: litchi jar

The same premium glass honey jar floating in the exact vertical center, pure black studio background, warm golden spotlight from above, the jar filled with deep amber mustard-blossom honey, same cream label with "ASSAM HONEY" in elegant serif gold lettering and "MUSTARD" beneath it, a few tiny mustard-flower petals resting beside the jar, floating in mid-air no surface no floor, ultra photorealistic 8K, luxury food product photography, no watermark, no extra text.

The same premium glass honey jar floating in the exact vertical center, pure black studio background, warm golden spotlight from above, the jar filled with dark, almost mahogany wild-forest honey, same cream label with "ASSAM HONEY" in elegant serif gold lettering and "WILD FOREST" beneath it, a small piece of raw honeycomb resting beside the jar, floating in mid-air no surface no floor, ultra photorealistic 8K, luxury food product photography, no watermark, no extra text.

Three premium glass honey jars (litchi, mustard, wild forest) arranged together in a single frame, floating at slightly staggered heights in the exact center of a pure black studio background, dramatic warm golden spotlight from directly above, each jar's honey color visible and distinct — pale gold, deep amber, dark mahogany — condensation-free clean glass, cream labels with "ASSAM HONEY" in elegant serif gold lettering, floating completely in mid-air with no surface no floor no table beneath them, ultra photorealistic 8K, luxury food product photography, no watermark, no extra text.

5b — Background / atmosphere images (2)

A wide cinematic shot of a traditional apiary at the edge of an Assam tea and litchi orchard at golden hour, rows of wooden beehive boxes among the trees, warm amber sunlight raking low across the fields, a light golden haze hovering above the ground, a few bees visible in soft blur near the hives, deep rich shadows with glowing highlights, no people, no text, no watermarks, ultra photorealistic 8K, wide atmospheric composition designed for a luxury scroll website background.

A vast wild forest in the Assam hills at deep twilight, tall trees silhouetted against a near-black sky with a faint ember-amber glow at the horizon, a single wild beehive visible high in a tree, atmospheric mist drifting between the trunks, extremely moody and cinematic, ultra dark luxury editorial feel, no people, no text, no watermarks, ultra photorealistic 8K.

5c — Lifestyle / detail images (3)

DIPPER DRIZZLE

[lifestyle-dipper-drizzle.png](#)

A close-up lifestyle shot of a wooden honey dipper lifting a thick ribbon of golden honey above the ASSAM HONEY jar, a human hand holding the dipper with elegant relaxed grip, pure black studio background, warm golden spotlight from above, honey ribbon catching the light with visible viscosity, floating in mid-air no surface no floor, ultra photorealistic 8K, no text no watermark.

HONEYCOMB MACRO

[lifestyle-honeycomb-macro.png](#)

An extreme macro close-up of raw honeycomb texture, individual hexagonal cells glistening with honey, a single bee walking across the surface, pure black background, dramatic warm side light raking across the wax texture, ultra detailed, shallow depth of field, luxury editorial food photography, no text no watermark, ultra photorealistic 8K.

HONEY TOAST

[lifestyle-honey-toast.png](#)

A refined lifestyle shot of honey being drizzled from a dipper onto a piece of rustic bread, pure black studio background, warm golden spotlight from above, honey pooling and glistening on the bread surface, steam faintly visible, high-end editorial food styling, floating props with no visible table edge, ultra photorealistic 8K, no text no watermark.

5d — Ritual card loop videos (3, ~4s each)

Upload the matching lifestyle or hero still as the start frame for each.

DRIZZLE

[card-drizzle.mp4](#) • **start:** [lifestyle-dipper-drizzle.png](#)

Using this image as the start frame, create a slow motion 4-second cinematic loop. A thick ribbon of golden honey drizzles continuously from the dipper into the jar below, the stream catching the warm spotlight and glowing amber, tiny honey threads breaking and reforming, pure black background throughout, no camera movement, loop-friendly ending.

DIP

card-dip.mp4 · start: image-6-honey-spoon-lift.png

Using this image as the start frame, create a slow motion 4-second cinematic loop. The spoon slowly rotates as the honey ribbon stretches and gently falls back into the jar, glossy highlights moving across the surface, pure black background, warm golden spotlight from above, no camera movement, loop-friendly ending.

STIR

card-stir.mp4 · start: image-5-honey-swirl.png

Using this image as the start frame, create a slow motion 4-second cinematic loop. The honey inside the jar slowly swirls and settles, tiny air bubbles rising gently through the amber liquid, the surface catching soft highlights, pure black background, no camera movement, loop-friendly ending.

COMPRESS ALL THREE THE SAME WAY

These are loop backgrounds, not the scroll mechanism — a standard keyframe interval is fine. The -an flag strips audio, since they're silent muted loops.

```
ffmpeg -i card-drizzle-raw.mp4 -vf scale=1280:-1 -movflags faststart \
  -vcodec libx264 -crf 20 -pix_fmt yuv420p -an card-drizzle.mp4
```

Repeat for card-dip and card-stir.

06 Organize the project folder

Get everything into this exact structure before opening AntigraVity.

```

assam-honey/                                ← open THIS folder in AntigraVity
├─ public/
│   ├─ frames/                              ← extracted JPEGs from Step 4b
│   │   ├─ frame_0001.jpg
│   │   └─ ...
│   │   └─ frame_0XXX.jpg
│   └─ images/
│       ├─ hero/
│       │   ├─ image-1-honeycomb-hero.png

    ├─ card-dip.mp4
    └─ card-stir.mp4
  
```

Naming rules: lowercase only, hyphens not spaces or underscores, no leading or trailing spaces. If everything landed in your Downloads folder mixed together, don't sort it by hand — drop it all into one folder and hand Antigravity this:

PROMPT · COPY EXACTLY

```
I've dropped a batch of AI-generated images and videos into this folder. Please
organize them into this exact structure: create public/images/hero/,
public/images/product/, public/images/backgrounds/, public/images/lifestyle/,
public/videos/, and public/frames/ subfolders, and move each file into the correct one
based on its filename and content. Once done, show me the final folder tree so I can
confirm everything is in the right place.
```

07 The master prompt

Open Google Antigravity, start a new project, upload the entire public/ folder keeping the structure intact, and paste the following exactly as written.

MASTER PROMPT · PASTE INTO ANTIGRAVITY

Build index.html for ASSAM HONEY, a premium raw-honey brand from the Assam hills. The site must feel dark, cinematic, premium, and editorial – a single continuous scroll story, not a template with sections bolted together. Use vanilla HTML, CSS, and JavaScript, single-file structure (index.html only, no build tools, no npm). Use GSAP + ScrollTrigger for scroll-linked motion and Lenis for smooth scrolling.

CRITICAL PERFORMANCE RULE – read this before writing the hero section:

Do NOT preload every hero frame before revealing the page – that produces a long blank loading screen and feels sluggish. Instead:

- Preload only the first 40 frames, then hide the loading screen and reveal the page.
- As the user scrolls, load frames just-in-time using a rolling cache: keep a window of about 60 frames decoded on each side of the current scroll position, and prefetch about 15 frames ahead in the current scroll direction so scrubbing never looks frozen.
- Prune frames outside that window from the cache (let them be garbage collected) as the user scrolls past them.
- Draw the current frame to a canvas sized to window.innerWidth/innerHeight * devicePixelRatio, using a cover-fit (never stretch or letterbox).
- Frame index = 1 + Math.round(progress * (TOTAL_FRAMES - 1)), progress computed from getBoundingClientRect() on the pinned hero track – never window.scrolling alone.
- Count the actual number of files in public/frames/ and use that as TOTAL_FRAMES – path pattern frames/frame_0001.jpg through frames/frame_XXXX.jpg (4-digit padded).
- Do NOT use a <video> element or video.currentTime for the hero. Canvas + frame sequence only – this is the same technique Apple uses on its own product pages, chosen specifically because video.currentTime seeking is unreliable across browsers and devices.
- Name the frames array 'frames' and any other image arrays (e.g. product-panel images) something distinct like 'panelImages' – never reuse one generic variable name for both.

USE EVERY ASSET – nothing should be left unused:

Hero frames: frames/frame_0001.jpg through the last extracted frame – the hero canvas sequence itself.

images/hero/ (image-1 through image-7) – these are the storyboard reference the frame sequence was built from. Do not place them directly as page images; image-1-honeycomb-hero.png may be used as a static fallback/poster shown behind the canvas before the first frames load.

images/product/ – assam-honey-litchi.png, assam-honey-mustard.png, assam-honey-wild.png – used in the sticky product explainer, the horizontal collection rail, and the product collection grid.

images/backgrounds/ – bg-apiary-golden-hour.png (horizontal collection rail intro panel, reverse-columns section, newsletter background), bg-forest-twilight.png (parallax statement section).

images/lifestyle/ – lifestyle-dipper-drizzle.png, lifestyle-honey-toast.png, lifestyle-honeycomb-macro.png – small macro/texture accent images placed between sections (not full sections), sized to fit without disrupting layout.

videos/card-drizzle.mp4, videos/card-dip.mp4, videos/card-stir.mp4 – autoplay muted loop playsinline background clips in the stacking ritual cards section.

Build the page in this order:

1. HERO – canvas frame-sequence per the performance rules above.

Text overlays (opacity 0 default, fade transition 0.6s ease):

progress 0.15-0.25: ASSAM HONEY – 96px serif display font weight 300, off-white, centered

progress 0.35-0.45: Raw from the Assam hills. – 28px italic, off-white, centered

progress 0.55-0.67: LITCHI · MUSTARD · WILD FOREST – 60px serif display, off-white, centered

progress 0.70-0.80: One drop. A thousand blossoms. – 12px uppercase letter-spacing 4px, off-white, top 10% left 8%

Nav: ASSAM HONEY fixed top-left, SHOP fixed top-right, small uppercase tracked-out serif, z-index 100.

Progress bar: fixed 2px right edge, dim gold background, bright gold fill, height grows 0 to 100vh with scroll.

2. STICKY PRODUCT EXPLAINER

Left 50%: sticky product image, starts assam-honey-litchi.png, swaps via IntersectionObserver as the right panels scroll.

Right 50%: three 100vh panels, CSS sticky only (no GSAP pin here):

Panel 1 LITCHI – "Light, floral, morning-bright." Litchi-blossom honey, harvested in early spring.

Panel 2 MUSTARD – "Deep, warm, quietly bold." Mustard-blossom honey, the classic Assam winter harvest.

Panel 3 WILD FOREST – "Untamed. Harvested by hand." Dark wild-forest honey, foraged not farmed.

3. HORIZONTAL COLLECTION RAIL

Pinned GSAP horizontal scroll, no black gaps, 4 panels: bg-apiary-golden-hour.png with

"THE COLLECTION" centered, then the three product jars with name text.

4. STACKING RITUAL CARDS

3 sticky cards, background videos card-drizzle.mp4 / card-dip.mp4 / card-stir.mp4, autoplay muted loop playsinline. Numbers 01/02/03 + words DRIZZLE / DIP / STIR:

DRIZZLE – "A ribbon of gold, straight from the comb."

DIP – "Slow, unhurried, exactly as it should be."

STIR – "Where the ritual settles into stillness."

5. PARALLAX STATEMENT

bg-forest-twilight.png full-bleed, slow parallax. "Nature's own / sweetness, untouched."

large italic serif. Tagline: "ASSAM HONEY – Since the first harvest."

6. REVERSE COLUMNS

3-column grid using bg-apiary-golden-hour.png, alternating vertical parallax. "Gathered from the wild." italic overlay centered.

7. PRODUCT COLLECTION GRID

3 cards: the three product jars, names LITCHI / MUSTARD / WILD FOREST, one-line descriptions each. Hover: lift + glow border.

8. NEWSLETTER

bg-apiary-golden-hour.png background with dark overlay. "Join the ritual." centered. Email input + Subscribe button.

9. FOOTER

Minimal, dark, brand name centered, copyright line.

Design rules – do not deviate:

- Off-white for ALL text – headings, nav, product names. Gold accent color is NEVER used as text color, only for buttons, accent lines, card borders, and the progress bar.
- Warm serif display font for all headings, clean sans-serif for body/labels.
- Use overflow-x: clip on html and body – NOT overflow-x: hidden, that breaks sticky positioning.
- End the script with ScrollTrigger.refresh().

After building, verify in the browser: confirm the loading screen disappears quickly (well under a second, since it only waits for 40 frames, not the full sequence), confirm scrolling the hero feels smooth with no stutter, and confirm every image and video listed above appears somewhere on the page.

08 Test locally

TERMINAL

```
cd public  
python3 -m http.server 8080
```

Open <http://localhost:8080> and check every line below before you deploy.

- ☐ Hero scrolls smoothly frame by frame — no stutter, no long blank loading pause.
- ☐ Text overlays fade in and out at the right scroll positions.
- ☐ Sticky product explainer swaps LITCHI → MUSTARD → WILD FOREST correctly.
- ☐ Horizontal collection rail scrolls with no black gaps before or after.
- ☐ Ritual cards loop their background videos correctly.
- ☐ Every section down to the footer renders, and no image is broken or missing.

09 Deploy to a live URL

TERMINAL · INITIALISE

```
git init
git add .
git commit -m "Assam Honey luxury scroll website"
```

Create a new repo on github.com, then:

TERMINAL · PUSH

```
git remote add origin https://github.com/YOUR-USERNAME/assam-honey.git
git branch -M main
git push -u origin main
```

Go to netlify.com or vercel.com → sign in with GitHub → import the repo → deploy with default static-site settings. No build command needed; it's a single `index.html` with local asset folders. You'll have a live URL in under two minutes.

Going further — the polish passes

Once the core site is live, run each of these as its own scoped prompt so you don't destabilise what already works.

Pure CSS/JS polish

Site-wide film grain, magnetic buttons, word-stagger text reveals, 3D tilt on product cards, a styled scrollbar, a provenance stats strip. No new assets needed.

Transparent product cutouts

If a jar needs to sit on a dark background with no visible seam, extract an alpha version rather than regenerating — shot on pure black, a luminance-threshold script cuts a clean PNG in seconds.

One ambient background video

A slow apiary loop for the newsletter section. Generate at low motion, high stillness — "nothing sudden, nothing fast" — then compress like the ritual cards.

The refinement rule

Never ask for two changes at once. One section, one prompt, one verification — that's how the site stays stable as it gets richer.

REFINEMENT PROMPT TEMPLATE

Keep [section/feature] completely untouched. Refine only [target section]. [Describe the specific change.] After updating, verify the result in the browser.

THIS GUIDE IS A TEMPLATE

Swap honey for any other product — the same nine steps rebuild the entire pipeline.

Chained keyframe images, start-and-end video clips, a merged hero video,
a frame-sequence extraction (never video scrubbing), an organized asset
folder, one master prompt, and a live deploy.
